About

Stop rebuilding UI from scratch. Unity UI Extensions is the flagship open-source UI control collection for Unity — 120 battle-tested controls for both uGUI and UI Toolkit. The controls you would build anyway are already here, polished and edge-case handled.

Community-driven since 2015, the project is 100% free and open source, distributed UPM-first via OpenUPM and git URL, and licensed under BSD-3-Clause (uGUI) and MIT (UI Toolkit). Maintained by Simon “darkside” Jackson and a global community of contributors.

The two-package ecosystem

uGUI — Unity UI Extensions

The original and largest collection — 100 production-ready controls for Unity's uGUI system, refined over a decade of community use. This is the V3 release.

- Package id [com.unity.uiextensions](#) · v3.0.0-pre.1 · Unity 6000.0+ · BSD-3-Clause
- 100 controls · ~195 runtime scripts · 21 example scenes
- Categories: Controls, Primitives, Layouts, Effects & Utilities

UI Toolkit — Unity UI Toolkit Extensions

The modern companion — 20 USS-themable, data-driven controls built from the ground up for Unity 6's UI Toolkit runtime.

- Package id `com.unity.uitoolkitextensions` · v1.0.0-pre.1 · Unity 6000.0+ · MIT
- 20 controls · ~21 runtime scripts · 8 example scenes
- Built with USS · fully themable · data-driven UI

Key features

- **Ship weeks faster** — the controls you would build anyway, polished and edge-case handled.
- **Production battle-tested** — a decade of community use, bug reports and fixes since 2015.
- **UPM-first distribution** — OpenUPM or git URL, clean dependency management.
- **Fully customisable** — Inspector-exposed for uGUI, USS-themable for UI Toolkit.
- **Examples included** — 29 playable example scenes across both packages.

Quote

“Two packages, one ecosystem — that is the whole story of 3.0. For ten years the community has built the controls you would build anyway, polished them, and handled the edge cases so you do not have to. The controls you would build anyway are already here. Ship faster. Build better.”
